

## Sustainable, safe and super strong for repeated wiping

The new range of Tork industrial wipers are made from 4 ply tissue and are reinforced with cotton scrim netting to offer superior strength during wet or dry use. Thick paper also protects hands from heat and metal scraps.

Ideal for multi-purpose and repeated wiping or cleaning in food services, facilities management, mining and heavy-duty industrial segments.

**Sustainable** as other wipers use plastic or nylon scrim compared to Tork wipers which are made using sustainably-sourced cotton. Combination of paper and cotton makes our wipers compostable so that less waste ends up in landfill

**Increase safety** by removing ignition risk with cotton scrim netting in flammable workplaces such as commercial kitchens or active mines and quarries or other hot work areas, where welding, cutting, brazing, grinding or drilling is required

**Reduce cost and waste** with easy-to-tear perforation ensuring you only use what you need, when you need it
